

國立中正大學九十六學年度博士班招生考試試題

系所別 (組別): 心理學系

科目: 認知心理學

1. 試述「注意力」(attention) 可顯示在那些方面 (Manifestations of Attention) ? 並個別列舉一至二個知名的相關理論 (須簡述其內容)。(33 points)
2. The effects of change blindness (CB), inattention blindness (IB), as well as attention blink (AB) appear to have the shared phenomenology of adverse behavioral effect due to the lack or diversion of attention. For this question, please (a) describe for each effect the nature of the phenomenon and the typical experimental paradigm for demonstrating the effect, (b) for each effect, give one or two theoretical accounts that have been proposed to explain the phenomenon, and (c) provide a your own personal view whether and how these seemingly different effects and phenomena can be integrated under a single theoretical framework. (33 points)
3. In the scientific study of human memory, what issues (list three) do you think are most important and why? (34 points)
